

The USSAAC Webinar Series

Monday, November 5, 2018  
7:00 PM Eastern

# Transitioning Students Using AAC: Strategies to Promote Full Inclusion

**Presenter:** Tracy Rackensperger, Ph.D.

Institute on Human Development and Disability

University of Georgia

USSAAC's Vice-President of People Who Use AAC and Their Families

**Facilitator:** Sarah W. Blackstone, Ph.D.z

USSAAC's Past President

# Join today!

A promotional graphic for USSAAC membership. It features a yellow background with a sunburst pattern of diagonal lines on the left side. At the top, the acronym "USSAAC" is written in large, white, bold letters on a dark red ribbon. Below this, the full name of the organization is written in a smaller, black font. A section titled "Membership Benefits" in bold red font lists five bullet points. At the bottom, the website URL "www.ussaac.org" is displayed in black, and the USSAAC logo with the tagline "THE VOICE OF AAC" is in red.

**USSAAC**

Join the  
United States Society for  
Augmentative and Alternative  
Communication

**Membership Benefits**

- Discounted access to ISAAC's peer-reviewed journal, *Augmentative and Alternative Communication*
- Access to FREE webinar series - Including ASHA CEUs
- Reduced registration rate to ATIA Conference
- Priority consideration as guest author on SpeakUP blog
- Opportunities for professional networking & leadership

THE VOICE OF AAC

**New  
this year!**

## **Two-Year Membership Option**

Join USSAAC for 2019-2020 and save  
time on annual renewal!

### **Membership Rates**

	<b>One-Year</b>	<b>Two-Year</b>
Professional	\$120 CAN	\$240 CAN
Professional plus journal	\$205 CAN	not available
People who use AAC and their families	\$40 CAN	\$80 CAN
Full-time student or retired professional	\$52 CAN	\$104 CAN

Renew before December 31, 2018 and  
you will be entered into a drawing to win a  
free registration to the 2019 ATIA  
Conference in Orlando, Florida.

College of Family and Consumer  
Sciences

Institute on Human Development  
and Disability

University of Georgia  
Athens, GA

USSAAC's VP of Persons Who Use  
AAC and their Family Members

# WHAT WILL YOU LEARN?

- 1) Identify strategies to support students using AAC in living fully inclusive lives.
- 2) Describe how using person-centered planning, strengths-based approaches, self-advocacy / self-determination building activities play significant roles in the lives of students using AAC
- 3) Explain how I was able to reach my potential.

## Supporters

USSAAC would like to recognize and thank our Institutional and Corporate Members for their support

# Transitioning Students Using AAC: Strategies to Promote Full Inclusion

Tracy Rackensperger, Ph.D.

Institute on Human Development and Disability

University of Georgia

USSAAC's Vice-President of People Who Use AAC and Their Families

# Overview of Session

This session will:

provide you with strategies to support students using AAC in living fully inclusive lives.

engage you to discover how using person-centered planning, strengths-based approaches, self-advocacy / self-determination building activities play significant roles in the lives of students using AAC.

# Background

People who use augmentative and alternative communication (AAC) and their families have goals for life after high school (Bryen & Moulton, 1998).

Many students needing AAC are deprived of the chance to partake in appropriate general education (Light & McNaughton, 2015).

More than 95% of individuals with complex communication needs are unemployed (Light & McNaughton, 2015).

# Background

Many students are denied access to AAC because of various myths, including the common myth that AAC hinders speech development (Ronski & Sevcik, 2005).

Many adults with intellectual disabilities and complex communication live in group homes without AAC interventions (Kane, 2015).

The outcomes for individuals who experience more significant forms of Autism Spectrum Disorders are very poor. These individuals generally do not make use of speech and do not have employment skills. (Nicholas, Addridge, Zwaigenbaum, & Clark, 2015; Shattuck et al., 2012).

# Post-School Outcomes Emphasizing Inclusion

Competitive employment

Post-Secondary education

Community living

# Customized Employment

Individuals who use AAC find customized employment a successful way to gain meaningful work, real wages, and a means to contribute to the workplace.

Customized employment uses the practice of Discovery to uncover an individual's strengths, interests, task contributions, and conditions of employment to create meaningful work and a customized fit.

Rather than looking to work opportunities driven by the market, customized employment practices create employment that fulfills both the applicant with disabilities and the employer's needs.

# Customized Employment Strategies

Job carving –

Occurs by modifying one existing job or by blending tasks from multiple jobs to form new positions.

Job creation –

occurs through the process of job carving or by creating totally new job descriptions.

# Job Creation

## Resource ownership –

allows individuals to earn income by bringing their own equipment, machinery, or other items which are needed by employers.

## Self-employment –

involves business planning, designing support strategies, and promoting successful business ventures giving job seekers a number of possibilities for developing flexible and innovative strategies regarding work.

# Types of Post-Secondary Education Options

Vocational / Technical School, Community College, or  
College

Inclusive Post-Secondary Education

# Accommodations

A school may not discriminate on the basis of disability.

It must insure that the programs it offers, including extracurricular activities, are accessible to students with disabilities.

Postsecondary schools can do this in a number of ways:

- by providing architectural access

- providing aids and services necessary for effective communication

- by modifying policies, practices and procedures

# Inclusive Post-Secondary Education

For people with intellectual and developmental disabilities

Students receive individualized services in college courses, certificate programs, and/or degree programs, for audit.

The individual student's vision and career goals drive services.

The focus is on establishing a student-identified career goal.

# Community Living

Through supported living arrangements individuals, even those who use AAC, are able to live in their own homes, control their lives and become part of their communities.

# Combating the Segregation Cycle

Sometimes, when we think about transitioning students who use AAC, we, along with family members, may only consider group homes and day programs for individuals.

In reality, given the right planning, students with complex communication needs can be actively participating in inclusive communities.

# Identifying Supports

Finding out the strengths and abilities of students who use AAC will lead to creating supports promoting independence and productivity.

Using disability-specific supports (e.g., vocational rehabilitation) as well as natural supports (e.g., local career center) must be considered based on high expectations and needs.

# Systems Centered vs. Person Centered

System Centered	Person Centered
Focuses on deficits and labels	Focuses on capacities, gifts, strengths, & dreams
Plans usually include 'placement' in a program	Plans support a rich and active community life based on the individual's gifts & interests.
Inflexible, offering a limited number of program options	Flexible, finding new possibilities unique to each person

# Importance of Family Involvement

Supporting the self-determination of individuals enables these individuals to become self-reliant, and successful at the things important to them.

Fostering self-determination in childhood assists students as they transition into adulthood.

# Low-Technology AAC

For those just beginning to understand or investigate AAC, low-tech options may be very attractive to try and explore with people who have difficulty communicating verbally.

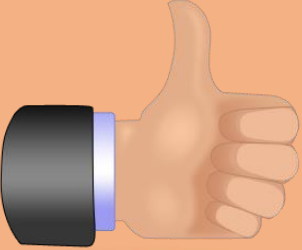

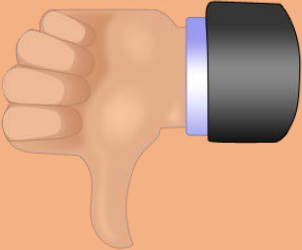

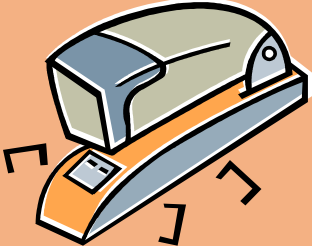

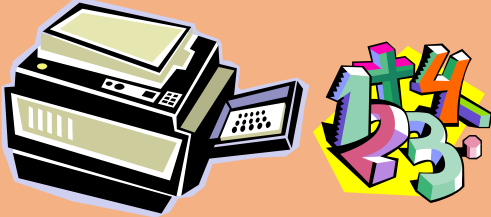

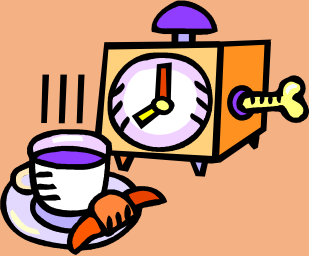

Low-Tech devices are...

- Easy-to-learn

- Inexpensive

- Makeable with common items

# Examples – Picture Boards

<p>Yes</p> 	<p>No</p> 	<p>I don't know</p> 
<p>I'll staple that for you.</p> 	<p>How many copies do you need?</p> 	<p>I'll show you where to find it.</p> 
<p>Do they need to be filed?</p> 	<p>Break Time!</p> 	<p>I'm leaving for the day.</p> 

# Examples - Photographs

Could you answer the phone for me?

I'd like something out of the cabinet.

Paul takes care of that.

# Low-Technology Books

Multiple picture pages and/or photographs can be bounded together to form communication books.

People with little or no control of their hands may be able to use a laser pointer attached to their heads to select messages.

# High-Technology

Some examples of high-tech devices are:

- Dedicated Synthesized Speech Generating Systems

- Dedicated Recorded Speech Systems

- Hybrid Systems

- Computer-Based Systems

# High-Technology (con't)

While high-tech AAC devices are often expensive and require evaluations, they offer an extraordinary level of independence to people.

# My Experience

I use augmentative communication to communicate with people who have difficulty understanding my own natural speech.

I have used these devices to interact with teachers, classmates, employers, coworkers, strangers and friends.

I am using augmentative communication more and more to give presentations, spread ideas, and help others who have developmental disabilities (Rackensperger, 2005).

# My Experience

My family has always been encouraging of augmentative communication, and so was the educational system.

I have been included in my schools since I was in the fourth grade and have had a methodology of communicating all the way through my schooling.

I was one of a small number of individuals introduced to augmentative communication at an extremely young age (Rackensperger, 2005).

# My Experience

I worked with SLPs to develop skills to use my augmentative communication device.

I worked with them on improving my verbal skills as well (Rackensperger, 2005).

# Keys to My Success

- Having high expectations
- Staying person-centered, not system-centered
- Utilization of natural supports to successfully transition into adulthood (Rackensperger, 2018)
